

Arei Product Scan Apps

Arei Product Scan Apps is an application used to view product information based on each product's barcode.

Information is captured by scanning the barcode using the camera feature or the device's built-in scanner.

The displayed data includes the product's stock data and product variants with the same item code.

Overview Application

This application was developed using the Dart programming language with the Flutter framework.

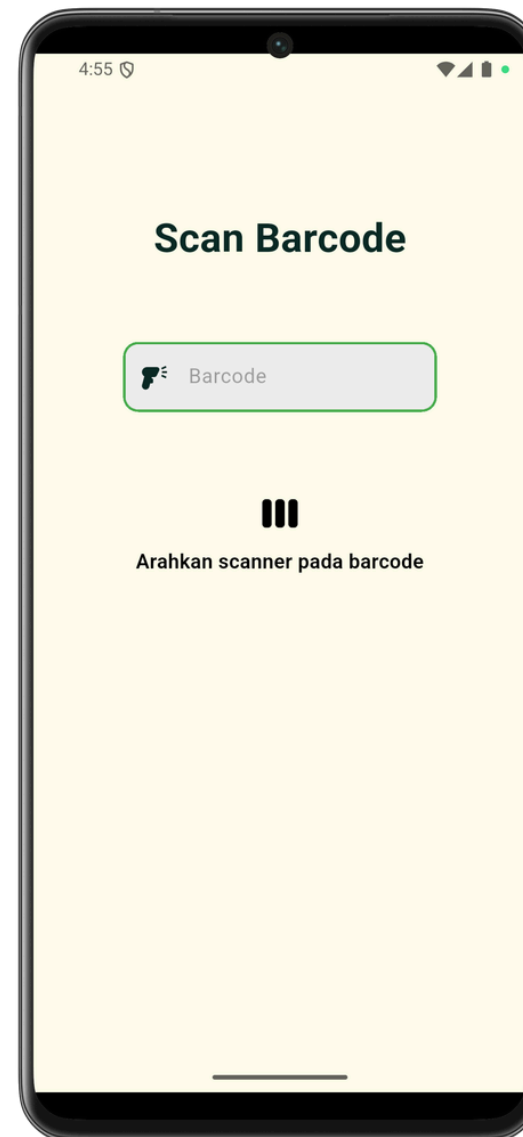

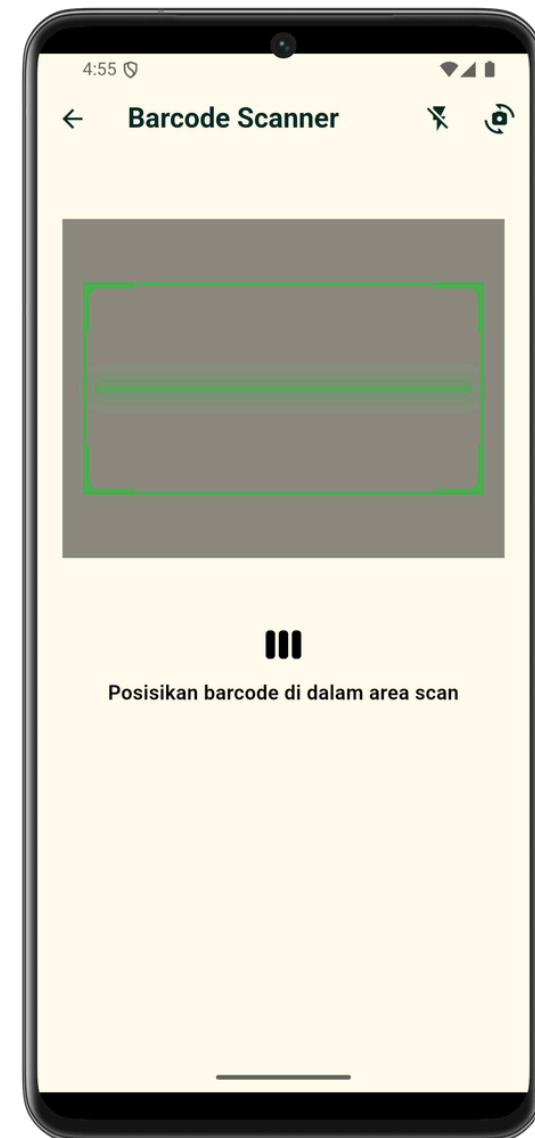

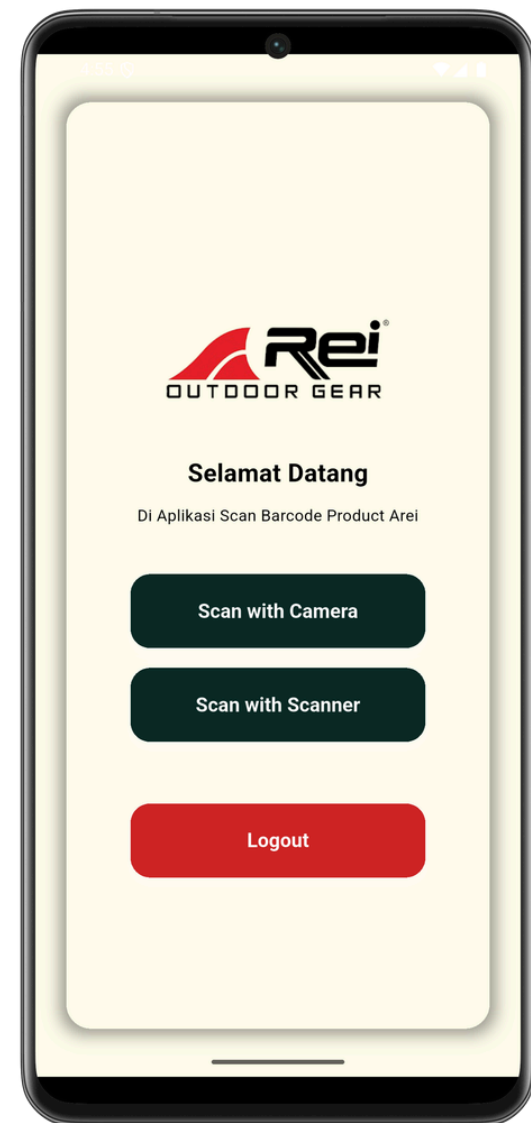

The implemented architecture is Clean Architecture, with BLoC (Business Logic Component) as state management to manage data flow and application status.

All data used by the application is distributed through a REST API provided by the website backend, which was developed using CodeIgniter 4.

Authentication Feature

The authentication feature in this application consists only of the login feature.

The login process is carried out using a combination of email and password.

Display Menu

The application has two main features:
Scan with Camera and Scan with Scanner.

01

Scan with Camera

This feature is used to scan barcodes using the device's camera as a scanning medium.

02

Scan with Scanner

This feature is used on devices that have a built-in barcode scanner, so that the barcode scanning process can be carried out using the scanner.

Results Page

01

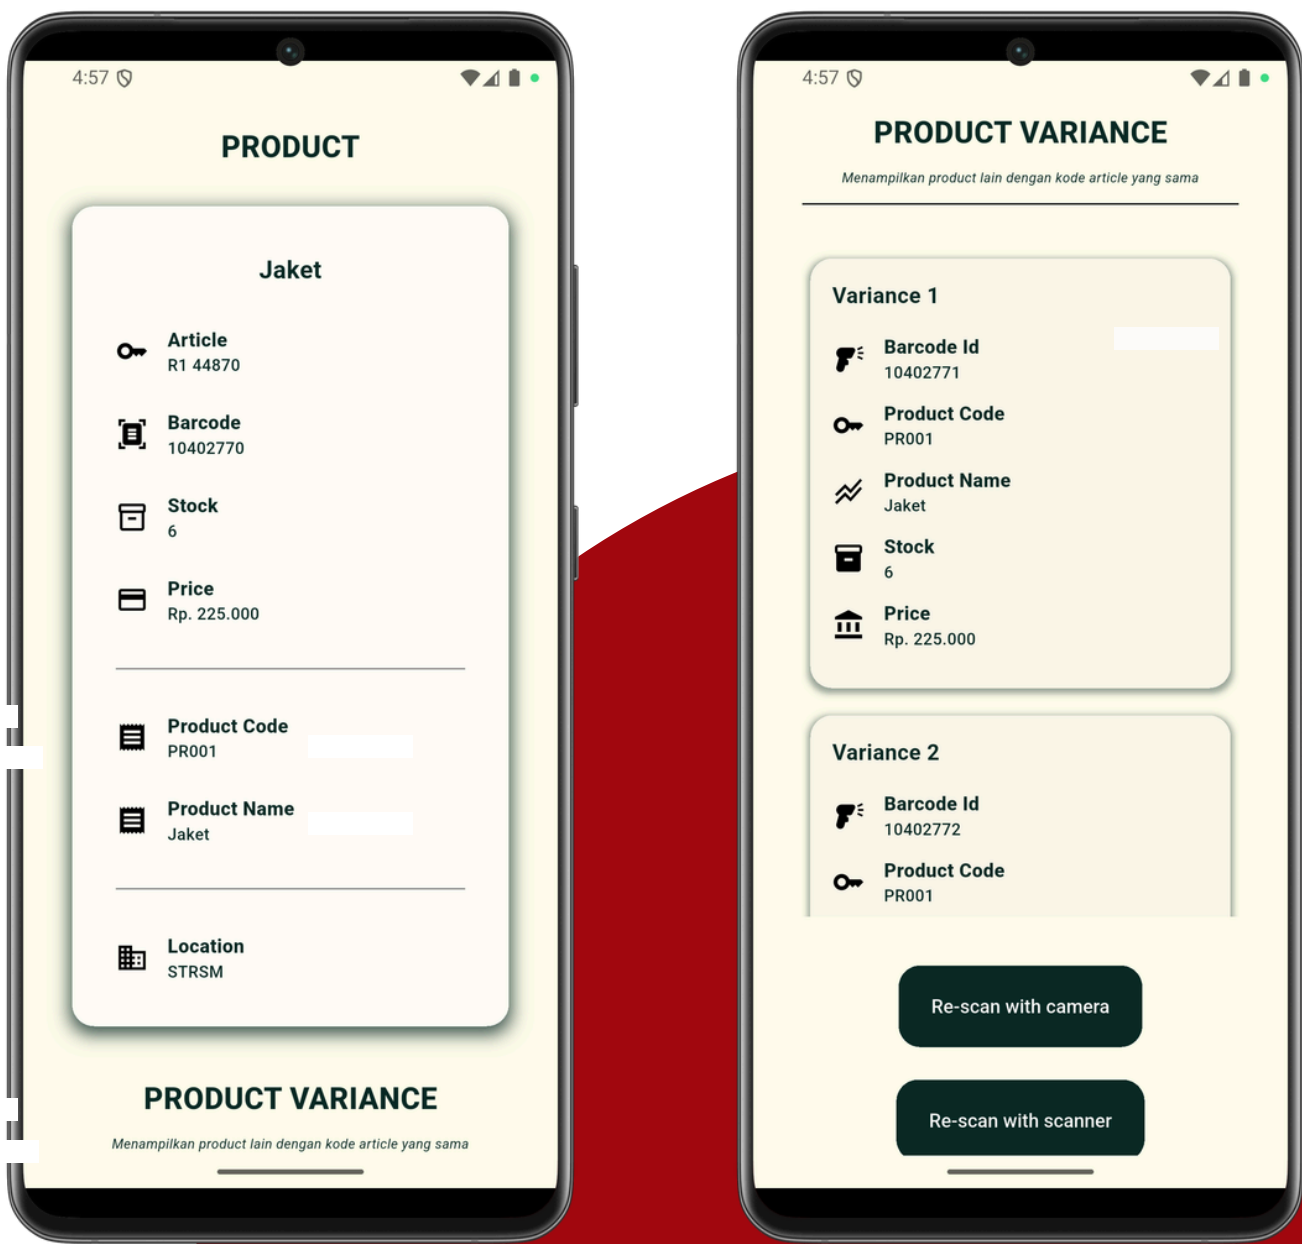

Result Product

Displays information about the scanned product.
Information includes product code, product name, stock, price, etc.

02

Result Product Variance

Displays product variant information based on the same article code.
The information displayed is the same as the product result, including stock, price, and so on.

Thank You
