

Co-trek Apps

Co-trek App is an application used to view product data, search for products, and check product stock and variations. In addition to product data, the app also allows users to view customer data, search for customers, and monitor customer status, whether active or inactive.

This application is specifically designed for data viewing purposes and is intended for use by supervisors.

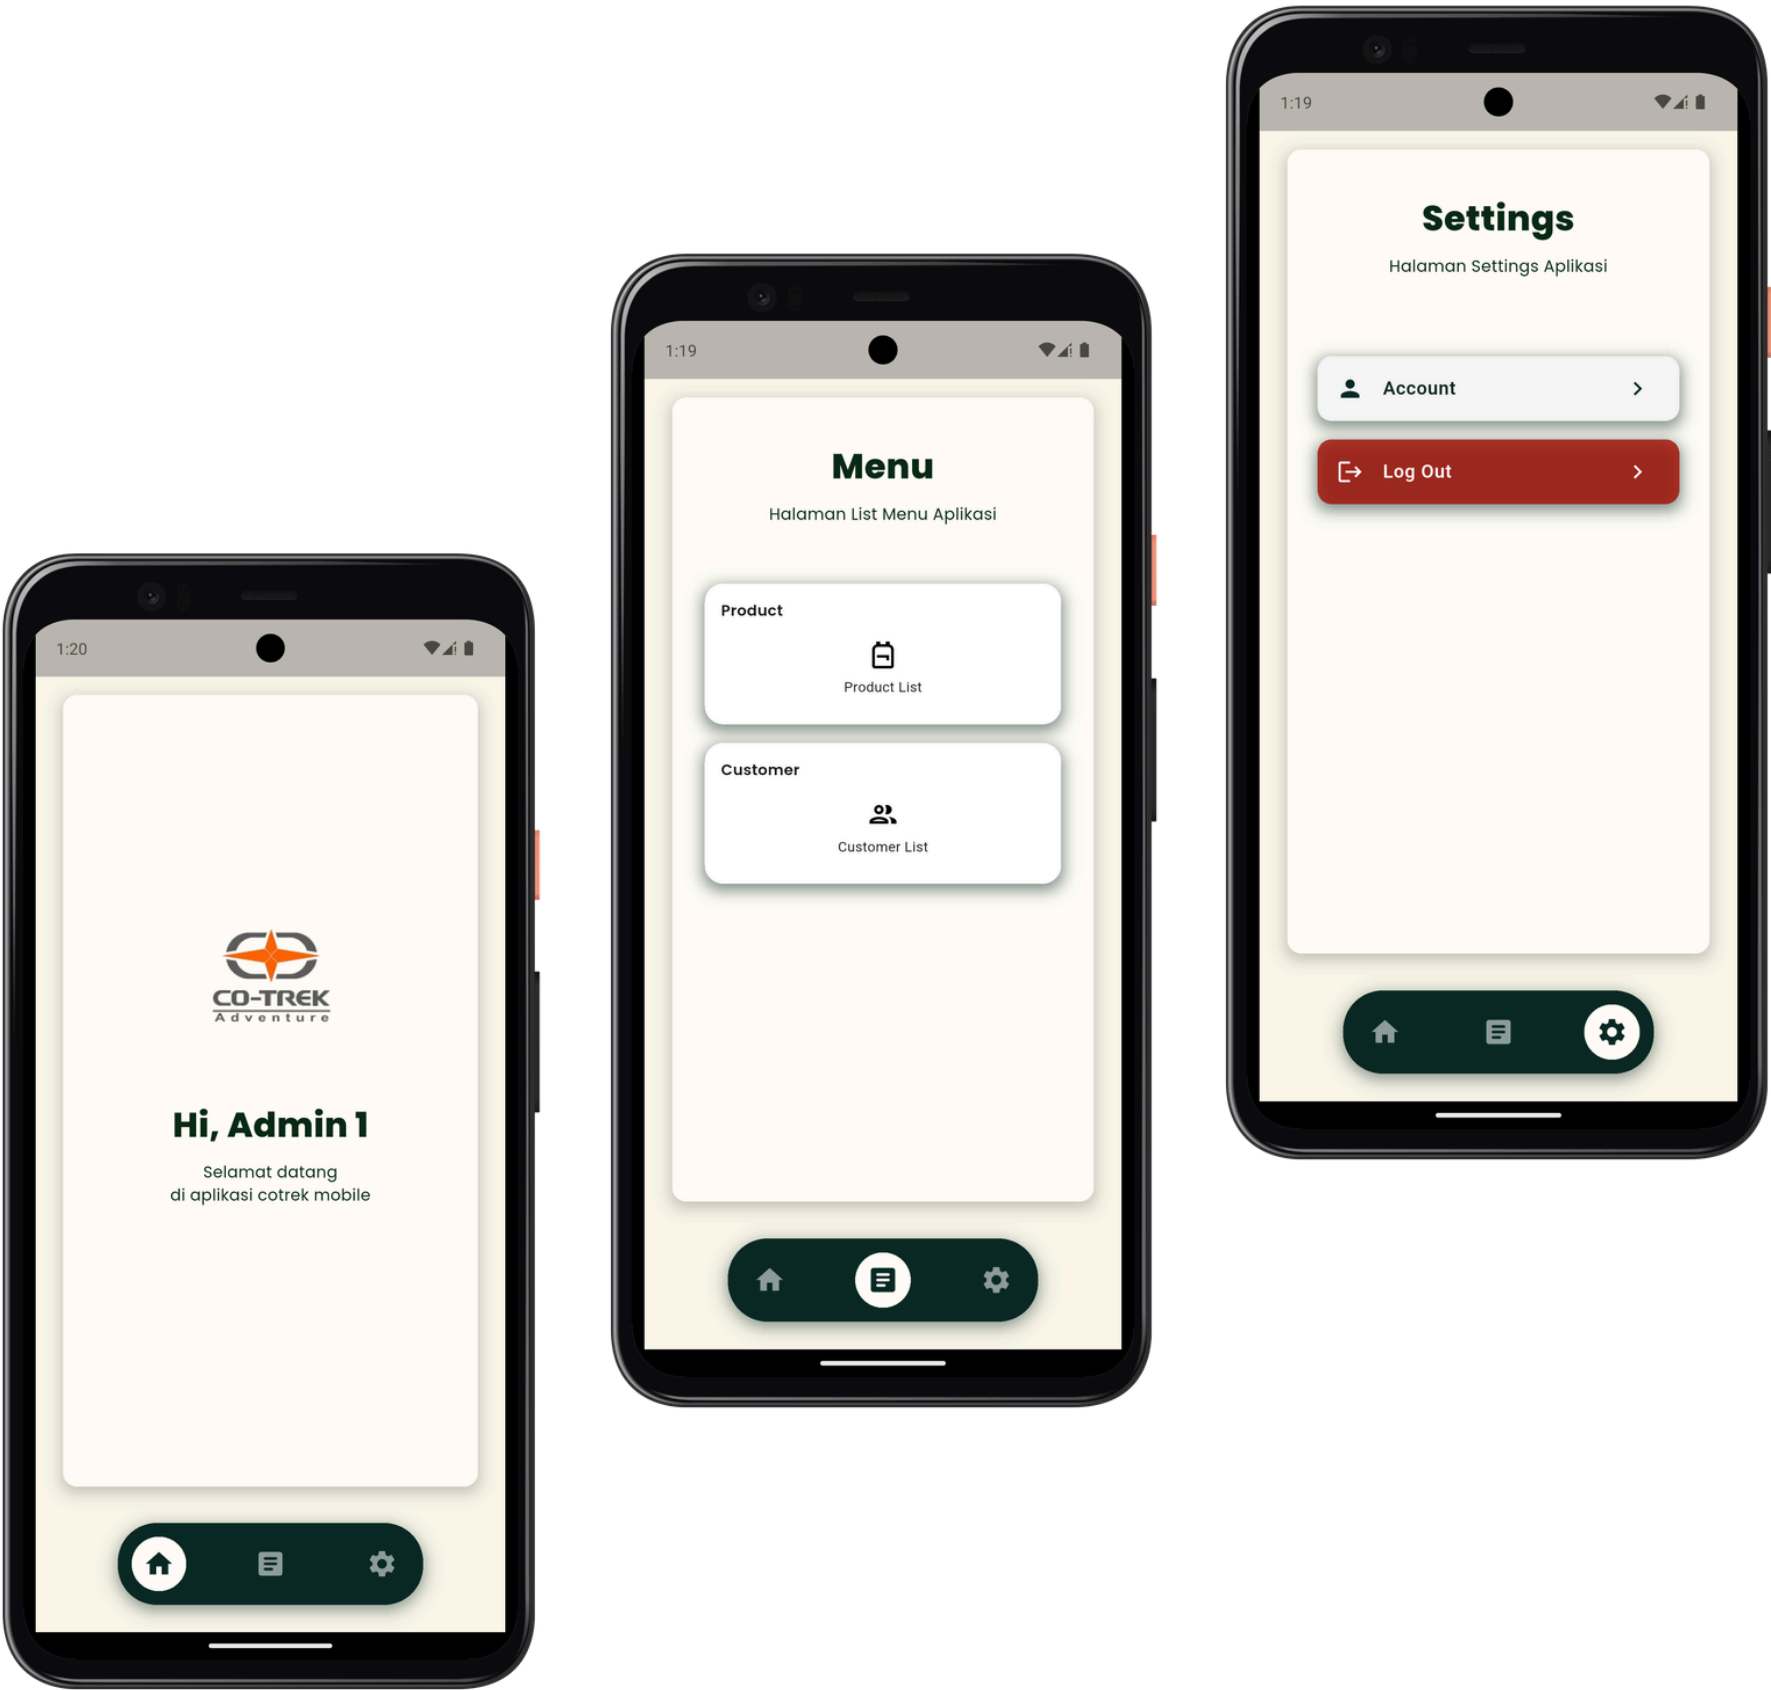

Overview Application

The Co-Trek App was developed using the Flutter programming framework. Application data is managed using a MySQL database, and all data is delivered to the app through APIs (Application Programming Interfaces) supported by a backend built with PHP using the CodeIgniter 4 framework.

Authentication Feature

The authentication feature in this application consists of login only. Only users with Admin access can log in. The login process uses a combination of email and password.

Display Menu

The app features three primary menus: Dashboard, Data, and Settings, each serving specific functions for users.

01

Dashboard Menu

The Dashboard menu displays the Co-Trek logo along with the username of the currently logged-in user.

02

Data Menu

The Data menu is the main menu that displays two sections: product data and customer data.

03

Settings Menu

The Settings menu includes a Profile feature, which allows users to update their profile information, and a Logout button to sign out of the application.

Data Menu

01

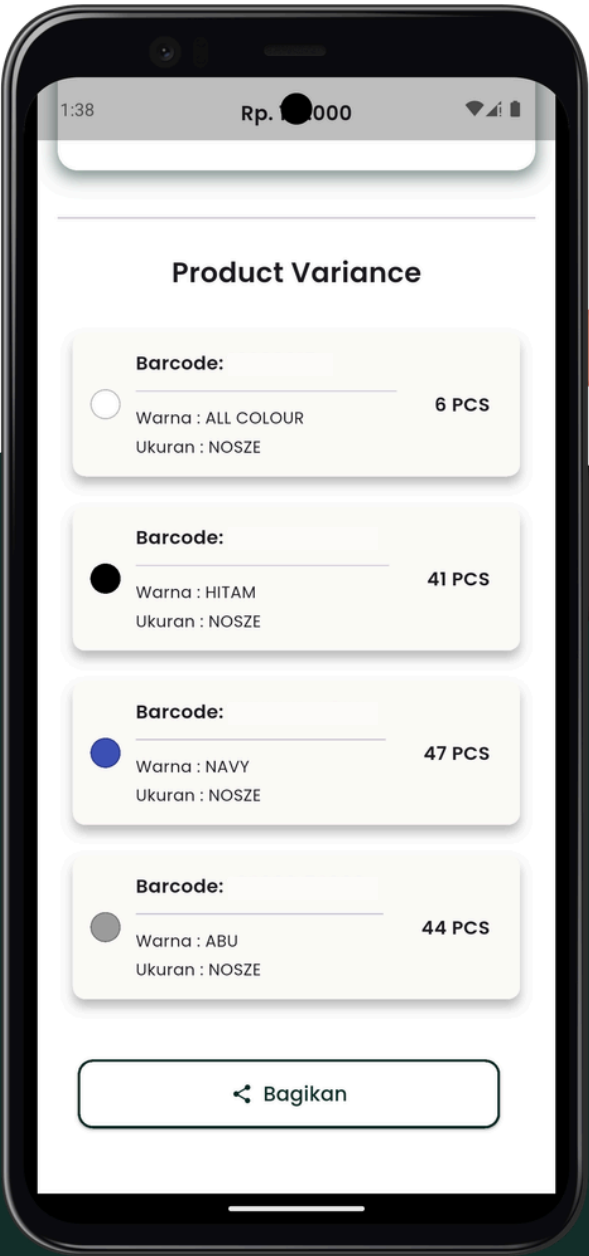

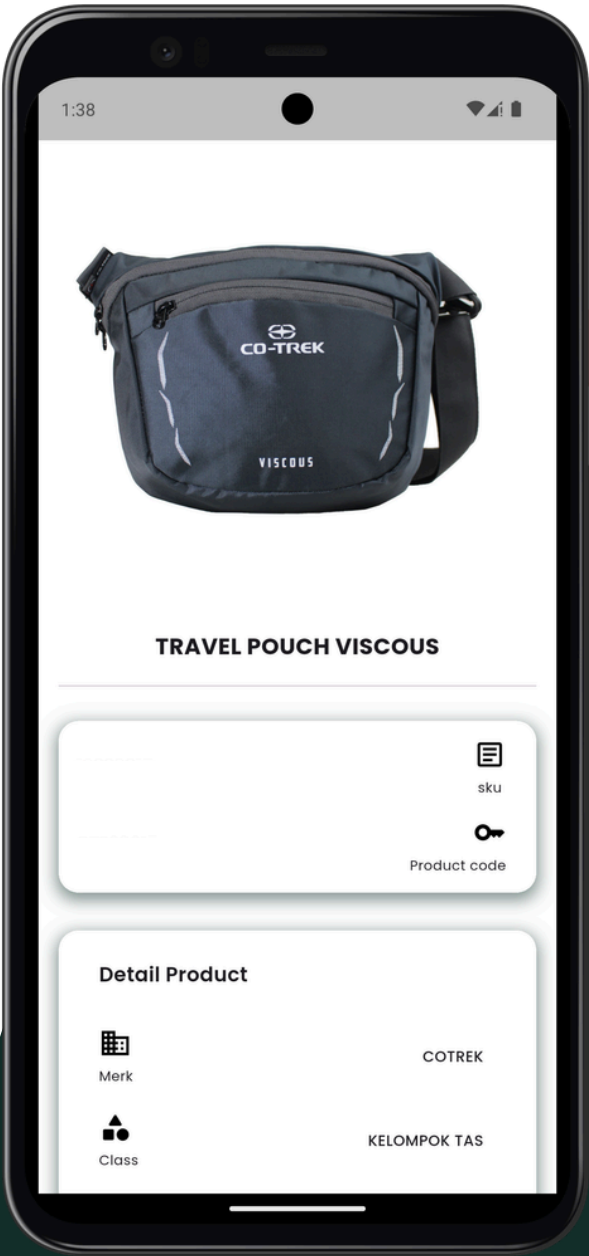

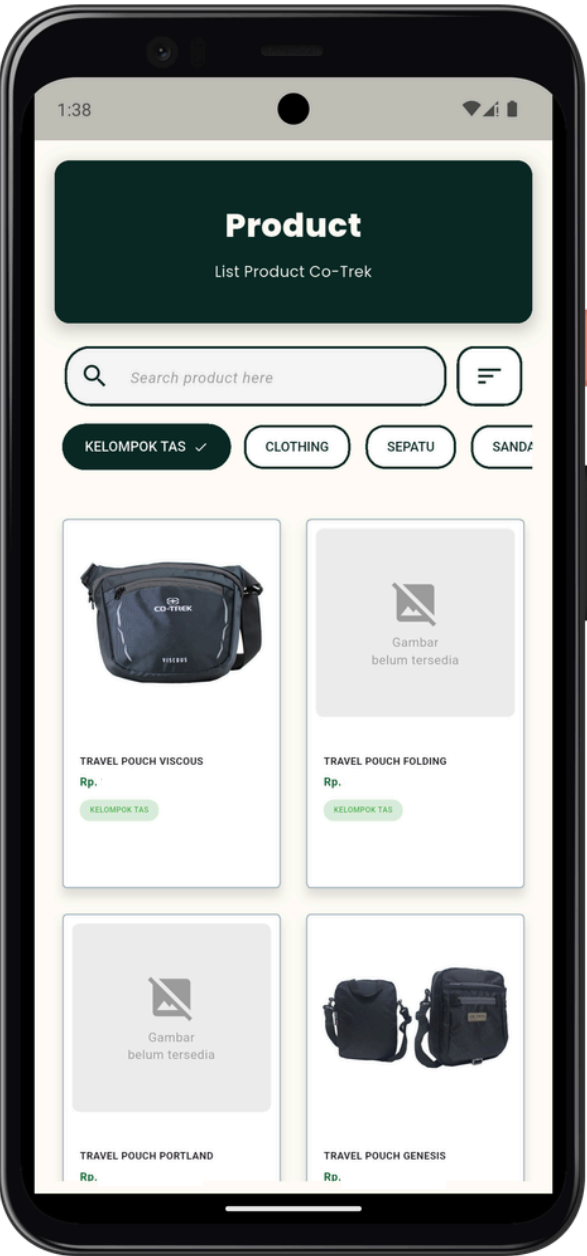

Data Page

On the product data page, information is displayed in list cards showing the product image, name, and price. The page header includes a search bar and filter feature, while product categories are also provided below the header to help users easily search and filter data.

02

Detail Page

The product detail page displays comprehensive information about the product, including its variants. Additionally, the page includes a share feature, allowing users to share product information via a URL link.

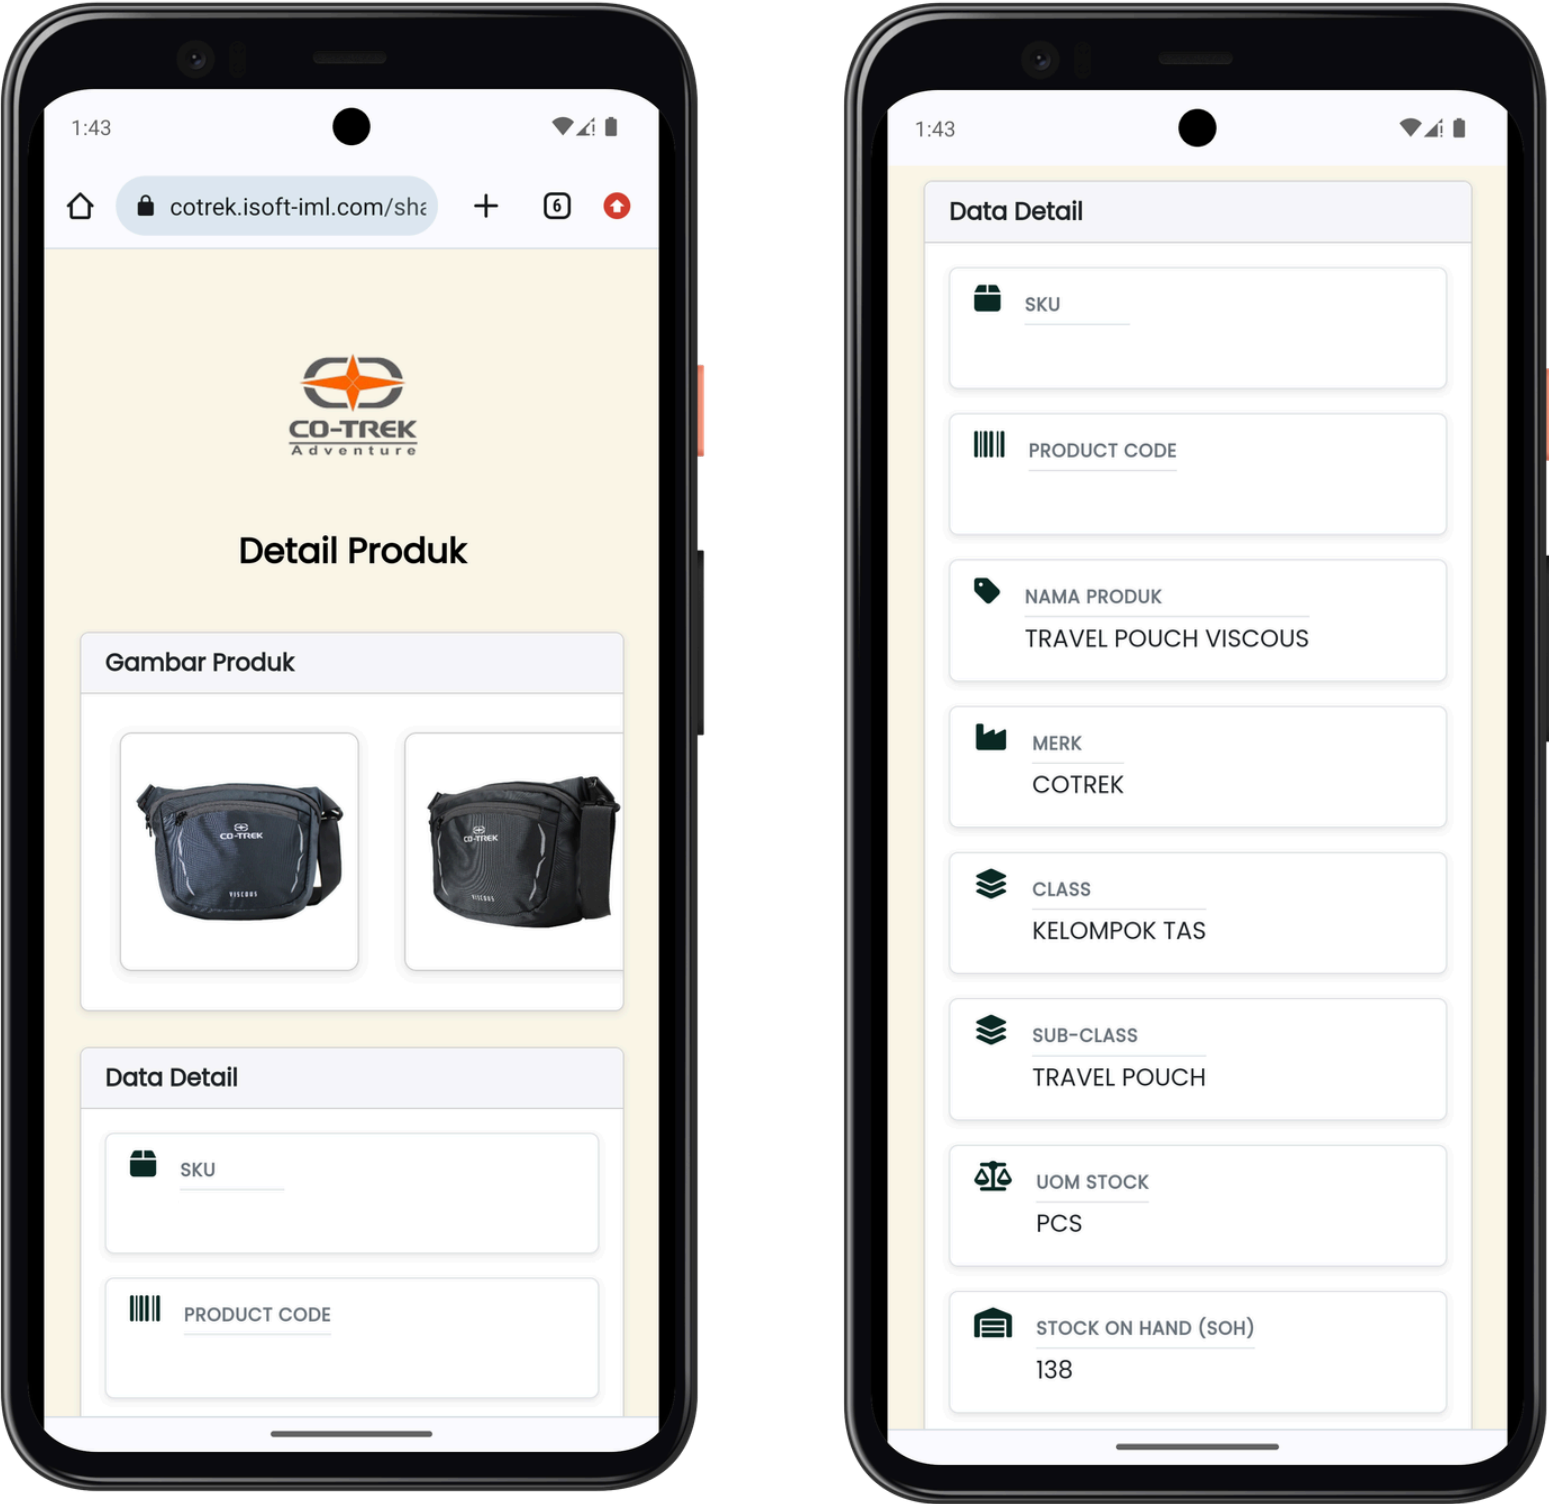

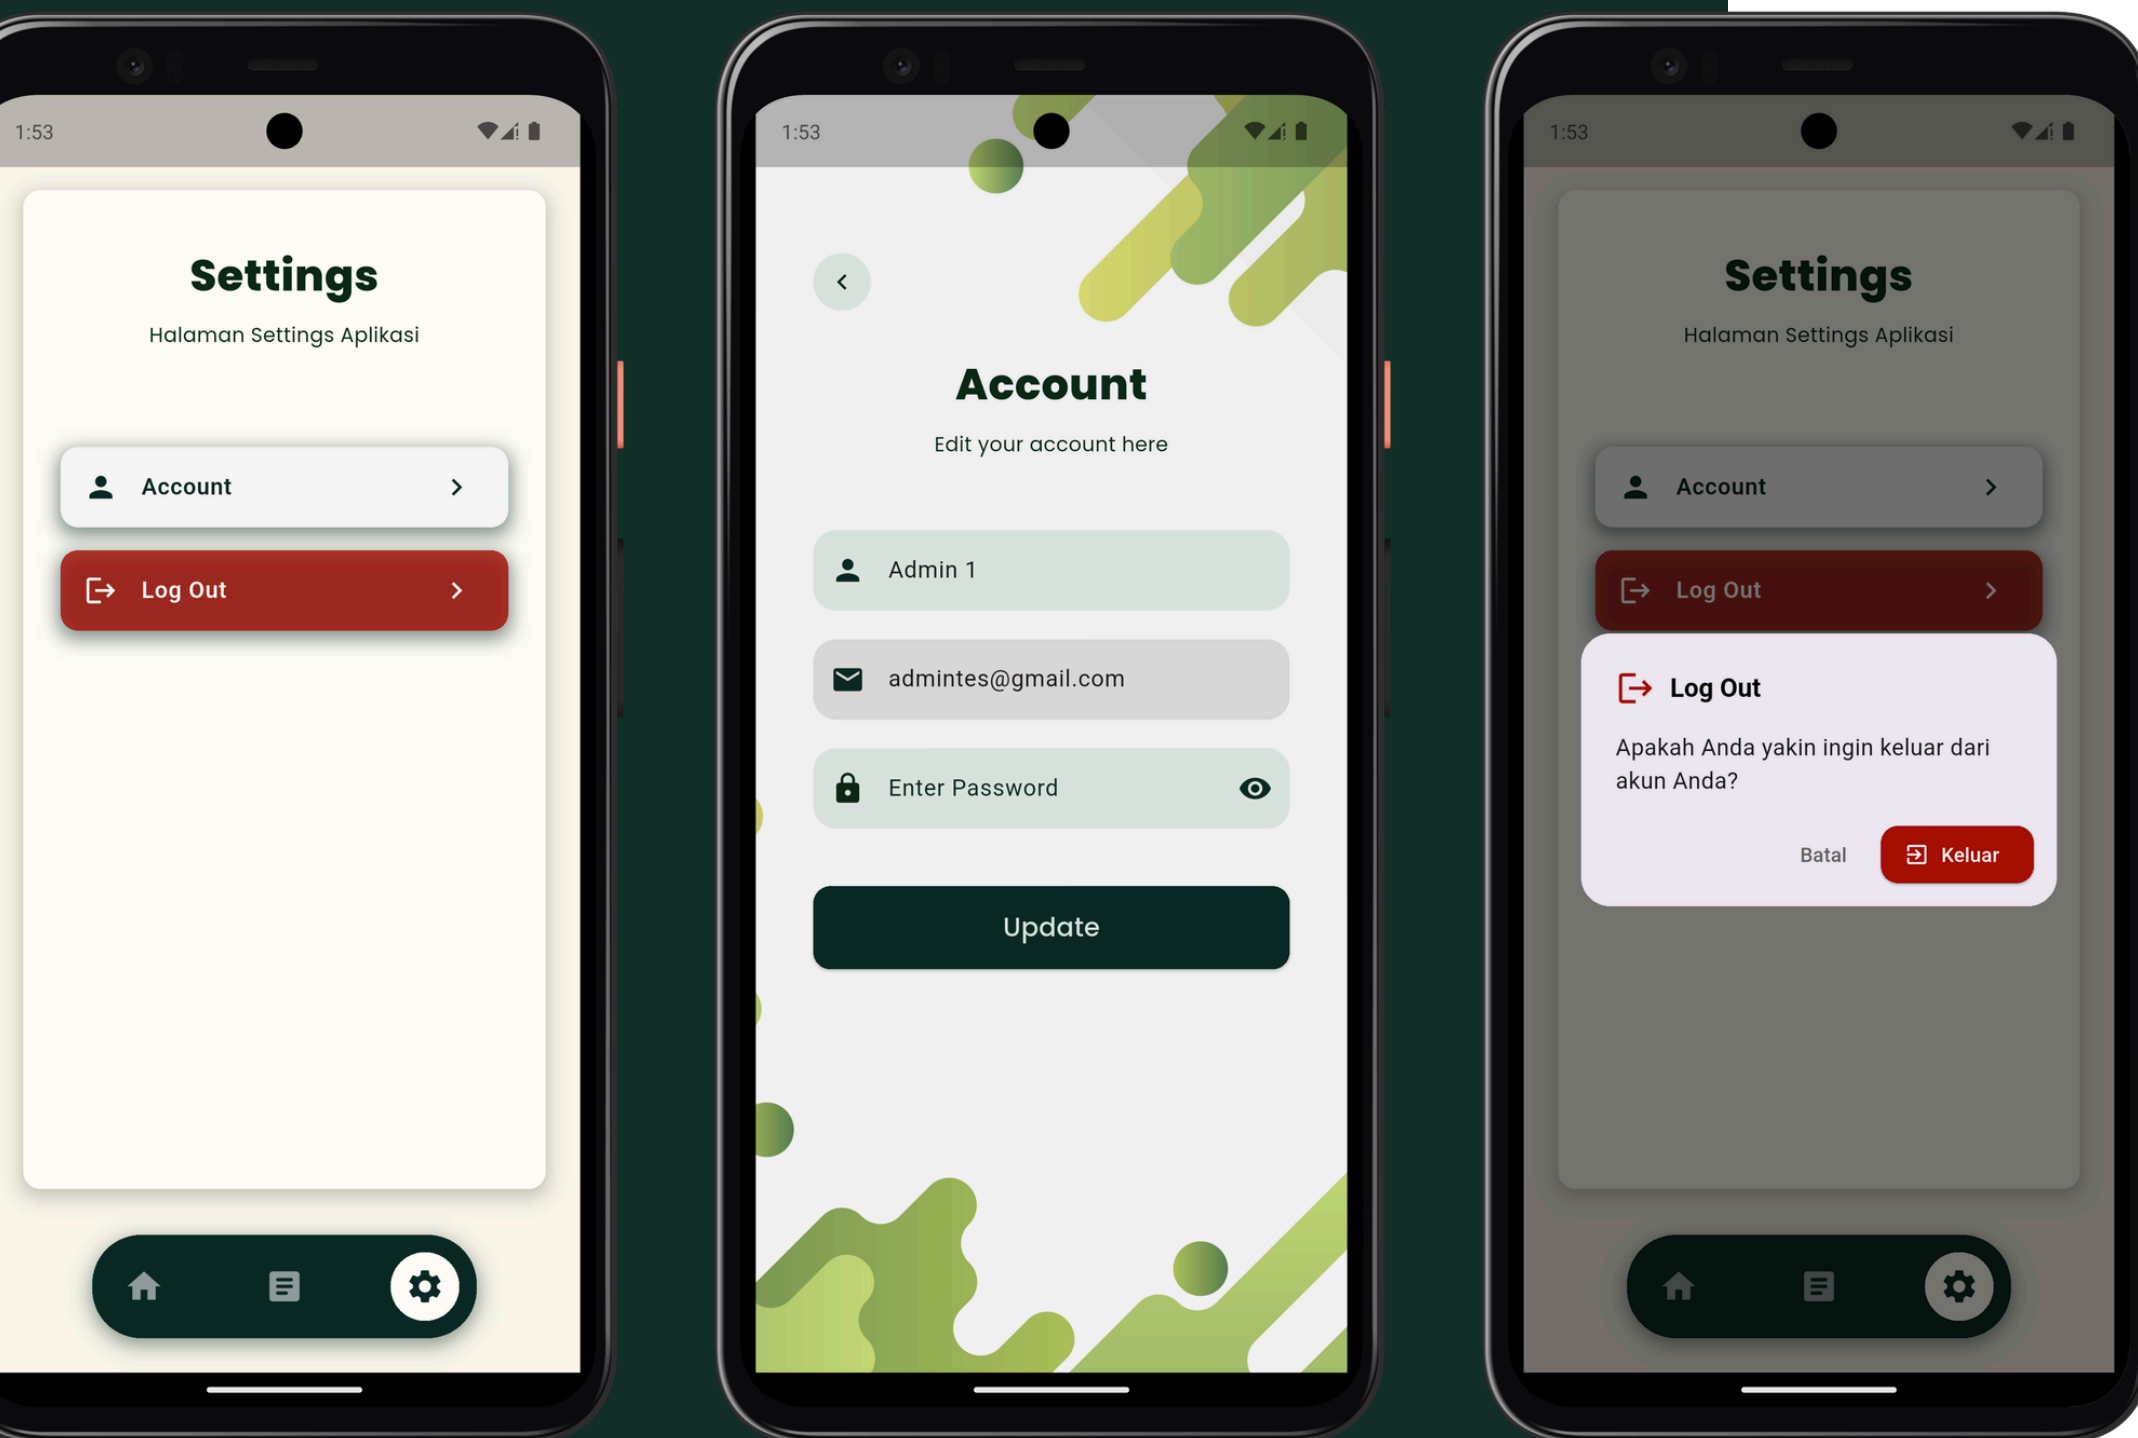

Share Data Feature

Share Data

The Share Data feature allows users to share product information. When the Share button on the product detail page is clicked, the app generates a URL link that can be copied and opened in a web browser.

Application Features

01

Settings Menu

The Settings menu has two main features: User Profile and Logout.

02

User Profile Page

This page is used to update user profile information.

03

Logout Button

The Logout button is used to sign out of the application.

Thank You

The Co-Trek App has been published on the Google Play Store.
